

LAB WORKSHEET

Lab 3 — LVM Provisioning and Capacity Planning

Name		Date	
------	----------------------	------	----------------------

Objective: 1.2 / 2.1 / 2.3 — LVM provisioning, online capacity growth, page/swap sizing, snapshots.

Work through the lab on the Killercoda Ubuntu playground and record your results below.

Task 1 — Build the stack

Create PVs, a VG and two LVs.

Paste vgs and lvs output.

Task 2 — Online growth

Extend the VG and grow the XFS DB volume online.

Record df -h /srv/db before and after.

Task 3 — Dedicated swap

Create, format and enable a swap LV.

Paste swapon --show output.

Task 4 — Snapshot restore

Snapshot lv_web, delete a file, restore from the snapshot.

Confirm the restored file contents and note the snapshot size.

Task 5 — Capacity report

Run the vgs / lvs / df capacity report.

Record VG size, VG free and data_percent as your baseline.

Completion checklist

- Built a working PV -> VG -> LV stack.
- Grew an XFS and an ext4 volume online with no downtime.
- Placed swap on a dedicated LV sized to guidance.
- Created and restored from an LVM snapshot.
- Captured a capacity-vs-utilisation baseline.
