

LAB WORKSHEET

Lab 6 — Installing a Server Operating System (Unattended / Scripted)

Name	_____	Date	_____
------	-------	------	-------

Objective: 2.1 — Install server OS: unattended/scripted, imaging, cloning, P2V, templates, HCL.

Work through the lab on the Killercoda Ubuntu playground and record your results below.

Task 1 — Minimum spec

Check architecture, RAM and disk against the OS minimum.

Record the values and confirm they exceed the minimum.

Task 2 — HCL check

Print product, CPU, NIC and storage controller and cross-check the HCL.

Paste the four values and note HCL status.

Task 3 — Autoinstall seed

Build the user-data and generate seed.iso.

Paste ls -lh seed.iso and one autoinstall config field.

Task 4 — Golden image

Capture a tar golden image and list the sysprep steps.

Record image size and the three sysprep actions.

Task 5 — P2V steps

List the five-step P2V workflow.

Write inventory -> quiesce -> image -> inject drivers -> power on.

Completion checklist

- Validated minimum spec and architecture.
- Completed the HCL cross-check.
- Built a working cloud-init seed.iso.
- Captured a golden image and listed sysprep steps.
- Described the P2V workflow and chose install types.
