

LAB WORKSHEET

Lab 7 — Partition and Volume Types, File Systems

Name		Date	
------	-------------	------	-------------

Objective: 2.1 — Partition/volume types (GPT, MBR, LVM) and filesystems (ext4, NTFS, VMFS, ReFS, ZFS).

Work through the lab on the Killercode Ubuntu playground and record your results below.

Task 1 — MBR partitions

Label a disk MBR and create two primary partitions.

Paste parted print and note the MBR limits.

Task 2 — GPT partitions

Relabel GPT and create three partitions.

Paste gdisk -l header and note the GPT limits.

Task 3 — Format three FS

Format ext4, XFS and a ZFS pool.

Record each mkfs/zpool command result.

Task 4 — Persist by UUID

Add a UUID-based /etc/fstab entry and run mount -a.

Paste the fstab line and confirm the mount.

Task 5 — FS selection

Choose the correct FS for a VMware datastore, a Windows share and a Linux DB.

State the FS for each with one reason.

Completion checklist

- Created both MBR and GPT tables and stated their limits.
- Formatted ext4, XFS and a ZFS pool.
- Persisted a mount by UUID in /etc/fstab.
- Mapped the five exam filesystems to their OS.
- Related Windows dynamic disks to Linux LVM.
