

LAB WORKSHEET

Lab 10 — Server Roles: Web, File, and Database

Name		Date	
------	----------------------	------	----------------------

Objective: 2.3 — Server role requirements: web, file, database (and print, application, messaging).

Work through the lab on the Killercoda Ubuntu playground and record your results below.

Task 1 — Web role

Serve a page and add a name-based virtual host.

Paste curl output for the default and site1 vhost.

Task 2 — File role

Create the SMB user and group share; list it.

Paste smbclient ls of the share.

Task 3 — Database role

Create appdb, the app user and a test table.

Paste the SELECT * FROM t result.

Task 4 — Role isolation

Apply a MemoryMax/CPUQuota limit to mariadb.

Paste systemctl show mariadb -p MemoryMax,CPUQuota.

Task 5 — Role inventory

Run the role-inventory script.

Paste the web/file/database active-state lines.

Completion checklist

- Served web content including a virtual host.
- Shared and accessed a Samba file share.
- Created a database, service account and least-privilege grant.
- Applied systemd resource limits for role isolation.
- Produced a role-inventory document.
