

LAB WORKSHEET

Lab 11 — Directory Services with OpenLDAP

Name		Date	
------	-------	------	-------

Objective: 2.3 / 3.3 — Directory connectivity: OUs as scope, groups as roles, ACL delegation.

Work through the lab on the Killercoda Ubuntu playground and record your results below.

Task 1 — Verify directory

Confirm `dc=lab,dc=local` is served.

Paste the `namingContexts` result.

Task 2 — OUs and users

Add the `people/groups` OUs and two users.

Confirm the `ldapadd` results.

Task 3 — Groups

Create `admins` and `operators` groups with membership.

List each group and its member.

Task 4 — Bind and search

Bind as `alice` and search `inetOrgPerson` entries.

Paste `ldapwhoami` and one search result.

Task 5 — Delegation

Apply the `olcAccess` ACL that lets `admins` write `ou=people`.

Explain how this is scope-based delegation.

Completion checklist

- Confirmed the LDAP base DN is served.
- Created OUs, users and groups.
- Set user passwords and bound as a user.
- Applied a group-based delegation ACL.
- Related the tree to Active Directory concepts.
