

LAB WORKSHEET

Lab 13 — Data Migration and Transfer

Name		Date	
------	-------------	------	-------------

Objective: 2.3 — Data migration and transfer: rsync, SCP, SFTP, Robocopy, fast copy, infiltration/exfiltration.

Work through the lab on the Killercoda Ubuntu playground and record your results below.

Task 1 — rsync sync

Sync src to dst, then dry-run --delete.

Record what --delete would remove.

Task 2 — scp vs sftp

Copy a file with scp and one interactively with sftp.

Note one difference between scp and rsync.

Task 3 — Cross-OS

State the recommended tool for each of the four directions.

Fill the direction -> tool table.

Task 4 — Fast copy

Copy a large file with pv and with dd oflag=direct.

Record the throughput each reported.

Task 5 — Exfil controls

Apply --bwlimit and list the exfiltration controls.

Name the four controls that distinguish migration from exfil.

Completion checklist

- Used rsync archive, delta, delete and bandwidth-limit modes.
- Contrasted scp, sftp and rsync.
- Chose the right cross-OS tool including Robocopy.
- Fast-copied a large file with pv and dd.
- Listed the exfiltration controls.
