

LAB WORKSHEET

Lab 16 — Scripting Basics for Server Administration

Name		Date	
------	----------------------	------	----------------------

Objective: 2.6 — Scripting: types, variables, constructs, data types, common admin tasks.

Work through the lab on the Killercoda Ubuntu playground and record your results below.

Task 1 — Variables

Write and run 01-basics.sh with local + exported variables.

Paste the script output.

Task 2 — Data types

Run 02-types.sh (integer, string, array).

Record the count, string length and array element results.

Task 3 — Conditional

Run 03-conditionals.sh disk check.

Record the OK/WARN/CRIT result and the disk %.

Task 4 — Bulk accounts

Run 06-accounts.sh.

Paste getent passwd for the three users.

Task 5 — Bootstrap

Review 07-bootstrap.sh set -euo pipefail.

Explain what each of the three flags protects against.

Completion checklist

- Named the four script types and their platforms.
- Used variables, arrays and the comparator table.
- Wrote conditional and loop constructs.
- Automated a service-status check and bulk account creation.
- Applied set -euo pipefail to a bootstrap script.
