

LAB WORKSHEET

Lab 17 — Asset Management, Documentation, and Licensing

Name		Date	
------	-------------	------	-------------

Objective: 2.7 / 2.8 — Asset management, documentation, BIA metrics, and licensing concepts.

Work through the lab on the Killercoda Ubuntu playground and record your results below.

Task 1 — Asset discovery

Run the asset-discovery script.

Paste the generated asset CSV.

Task 2 — Documentation set

List the eight documentation artefacts and capture the as-built.

Name all eight and paste the as-built ls.

Task 3 — BIA metrics

Define MTBF, MTTR, RPO, RTO, SLA.

Write one line per metric.

Task 4 — Uptime maths

State the annual downtime for 99.9% and 99.999%.

Record both values.

Task 5 — Licensing

Run the license-count script and pick the right model for a per-core DB.

Record sockets/cores/vCPUs and the chosen model.

Completion checklist

- Ran the scripted asset discovery.
- Listed the eight documentation artefacts and captured an as-built.
- Defined the BIA metrics and uptime maths.
- Mapped the licensing models.
- Validated a license count for a true-up.
