

LAB WORKSHEET

Lab 22 — Auditing, Logging, and SIEM Basics

Name		Date	
------	----------------------	------	----------------------

Objective: 3.4 — Data monitoring, log analysis / SIEM, two-person integrity, separation of roles.

Work through the lab on the Killercoda Ubuntu playground and record your results below.

Task 1 — auditd rules

Load the watch rules and trigger an id change.

Paste ausearch -k id_changes output.

Task 2 — Severity

Log a notice-level entry and recite the level table.

Record the syslog line and levels 0-3.

Task 3 — Rotation

Write the srvplus logrotate policy.

Note the rotate count and retention days.

Task 4 — SIEM correlation

Run the awk brute-then-success correlation.

Record whether any ALERT fired.

Task 5 — TPI / SoD

Explain two-person integrity and separation of roles.

Give one example of each.

Completion checklist

- Loaded auditd rules for the four audit targets.
- Recited rsyslog severity levels and TCP forwarding.
- Configured rotation/retention to policy.
- Ran a logwatch report and an awk correlation.
- Explained two-person integrity and separation of roles.
