

LAB WORKSHEET

Lab 24 — Patch and Update Management

Name		Date	
------	-------------	------	-------------

Objective: 3.5 / 2.4 — Patch management: testing, deployment, change management, cluster-aware patching.

Work through the lab on the Killercodea Ubuntu playground and record your results below.

Task 1 — Classify

List upgradable packages and isolate security ones.

Record counts of security vs. feature updates.

Task 2 — Smoke test

Write the smoke-test checklist.

List the five smoke-test items.

Task 3 — Apply + needrestart

Apply patches and run needrestart.

List services flagged for restart.

Task 4 — Auto-apply

Configure unattended-upgrades for security-only.

Paste the dry-run tail.

Task 5 — Rollback

Pin and hold a package version.

Paste apt-mark showhold.

Completion checklist

- Distinguished security from feature updates.
- Snapshotted and smoke-tested before applying.
- Applied patches with change-management discipline.
- Configured security-only auto-apply.
- Planned a rollback via pin or snapshot.
