

LAB WORKSHEET

Lab 25 — Secure Decommissioning and Media Destruction

Name		Date	
------	-------------	------	-------------

Objective: 3.6 — Server decommissioning: removal, media destruction, retention, cable remediation, recycling.

Work through the lab on the Killercoda Ubuntu playground and record your results below.

Task 1 — Create test drive

Create a loopback image with fake PII and read it raw.

Confirm the secrets are visible in strings.

Task 2 — shred wipe

shred the image and re-scan.

Confirm no plaintext recoverable.

Task 3 — nwipe

Run a DoD-method nwipe.

Record the method and pass count.

Task 4 — SSD erase

Explain why shred fails on SSDs.

State the correct SSD erase method.

Task 5 — Destruction table

Match each destruction method to when it's used.

Note which method is useless on SSDs.

Completion checklist

- Demonstrated that raw images leak plaintext.
- Performed a shred and an nwipe wipe.
- Explained SSD secure-erase / crypto-erase.
- Listed the physical-destruction methods.
- Walked the decommission and recycling workflow.
