

LAB WORKSHEET

Lab 26 — Backup Strategy: Full, Synthetic, Incremental, Differential, Snapshot

Name		Date	
------	-------------	------	-------------

Objective: 3.7 — Backups and restores: methods, media, rotation, restore methods, validation.

Work through the lab on the Killercoda Ubuntu playground and record your results below.

Task 1 — Full + incremental

Take a full and two incremental backups.

List the resulting archive sizes.

Task 2 — Differential

Take a differential and compare to incremental.

Note the restore-complexity difference.

Task 3 — Synthetic full

Run two restic snapshots.

Paste restic snapshots.

Task 4 — Restore methods

Perform overwrite, side-by-side and alternate restores.

Confirm all three succeed.

Task 5 — Validate

Run restic check and diff the restore against source.

Record 'restore matches source'.

Completion checklist

- Built full, incremental and differential backups.
- Created deduplicated synthetic-full snapshots.
- Performed the three Server+ restore methods.
- Explained media trade-offs and GFS rotation.
- Validated a backup with a test restore.
