

LAB WORKSHEET

Lab 27 — Disaster Recovery: Replication and Site Failover

Name		Date	
------	-------------	------	-------------

Objective: 3.8 — Disaster recovery: site types, replication modes, DR testing.

Work through the lab on the Killercoda Ubuntu playground and record your results below.

Task 1 — Site types

Compare hot/warm/cold/cloud on time and cost.

Fill the site-type table.

Task 2 — Async replicate

rsync primary to dr and confirm.

Paste ls /srv/dr.

Task 3 — Near-real-time

Start lsyncd, change a file, confirm propagation.

Confirm /srv/dr/app.txt shows v2.

Task 4 — Tabletop

Run the tabletop scenario with the team.

List two gaps / action items surfaced.

Task 5 — RPO match

Pick the cheapest replication meeting a 10-second RPO.

State your choice and why.

Completion checklist

- Compared hot/warm/cold/cloud DR sites.
- Replicated data async (rsync) and near-real-time (lsyncd).
- Explained sync vs. async and app-consistent replication.
- Ran a tabletop DR exercise.
- Matched a replication strategy to the BIA RPO/RTO.
