

LAB WORKSHEET

Lab 30 — Storage Troubleshooting

Name		Date	
------	-------------	------	-------------

Objective: 4.3 — Troubleshoot storage: boot errors, superblock/partition, RAID, cache battery, slow I/O.

Work through the lab on the Killercoda Ubuntu playground and record your results below.

Task 1 — Full disk

Compare `df -h` and `df -i`.

Explain how full inodes present as disk-full.

Task 2 — Superblock recovery

Corrupt then recover a superblock.

Record the backup superblock offset used.

Task 3 — RAID rebuild

Fail a RAID 5 drive and add a spare.

Paste the `/proc/mdstat` rebuild line.

Task 4 — Cache battery

Explain the BBU-failure write slowdown.

State the field response.

Task 5 — Cable / swap

Grep `dmesg` for link resets and check swap.

Note one cable clue and the swap fix.

Completion checklist

- Distinguished disk-full from inode-full.
- Recovered a corrupt superblock with fsck.
- Rebuilt a degraded RAID array.
- Explained cache-battery write-through slowdown.
- Read cable/backplane and swap symptoms.
