

LAB WORKSHEET

Lab 31 — OS and Software Troubleshooting

Name	_____	Date	_____
------	-------	------	-------

Objective: 4.4 — Troubleshoot OS and software: services, clock skew, patch failure, recovery modes, config mgmt.

Work through the lab on the Killercoda Ubuntu playground and record your results below.

Task 1 — Service triage

Status -> logs -> dependencies for a service.

List any failed units.

Task 2 — Clock skew

Check drift and force a chrony sync.

Record tracking before/after.

Task 3 — dpkg recovery

Break then recover dpkg state.

Record the dpkg --configure -a / apt -f install result.

Task 4 — Boot modes

Match Windows recovery modes to Linux targets.

Fill the recovery-mode table.

Task 5 — Ansible idempotency

Run the playbook twice.

Confirm the second run reports no changes.

Completion checklist

- Triaged a systemd service failure.
- Fixed clock skew with chrony.
- Recovered a broken dpkg state.
- Listed the recovery boot modes.
- Demonstrated Ansible idempotency to prevent drift.
