

LAB WORKSHEET

Lab 33 — Security Troubleshooting

Name		Date	
------	-------------	------	-------------

Objective: 4.6 — Troubleshoot security: integrity, privilege escalation, malware, permissions, MAC, DLP.

Work through the lab on the Killercoda Ubuntu playground and record your results below.

Task 1 — Ports + states

Audit open ports and process states.

Note any zombies/orphans and unexpected ports.

Task 2 — File integrity

Baseline AIDE, tamper a file, re-check.

Record the drift AIDE detected.

Task 3 — Malware scan

Scan the EICAR test file with ClamAV.

Record the clamscan detection line.

Task 4 — Misconfig hunt

Find world-writable and SUID files.

List one finding from each search.

Task 5 — Access triad

Apply the perms/MAC/service triad to a share.

State which layer blocked access.

Completion checklist

- Audited open ports and process states.
- Baselined and detected file-integrity drift with AIDE.
- Ran a ClamAV scan against the EICAR signature.
- Hunted world-writable and SUID misconfigurations.
- Applied the perms/MAC/service triad to an access failure.
